

Electro Hydraulic Thrusters

Today electro-hydraulic units, also known as ELHY or ELDRO thruster, are predominantly employed in heavy lifting equipment and conveying equipment. In combination with modern drum and disk brakes they ensure safe and gentle braking.

Binder Brakes & Clutches

MS Binder offers a wide range of brakes, that can suit motors from a frame size of 80 through to 180. Both brake and motor can have a protection degree of up to IP65. The motors are fitted with brakes which are single disc or multidisc and are all electrically released. Their 'failsafe' characteristic engages the brake.

Industrial Disc Brakes

USB and TEXU - Service or emergency stop brakes for container cranes, belt conveyor, bucket wheel excavator.

SHI - Emergency back-up brake on rope drums and conveyors.

SHD - Stopping and holding brake for wind power generators, blowers and turbines.

Binsi Drum Brakes

Versatile brake for general industrial applications, steel and material handling cranes and conveyors.

Storm Brakes

Static storm brake for rail-mounted cranes to prevent runaway in a storm or power failure.
